Data Management & Open Science Guidelines

Section 1: Data Management Requirements

All funded projects must submit a formal Data Management Plan (DMP) within the first 6 months of project start.

The plan must detail:

1. **FAIR Data Principles**: Datasets produced must be Findable, Accessible, Interoperable, and Reusable.
2. **Data Repositories**: Datasets must be deposited in recognized institutional or public open-access repositories (e.g. Zenodo, European Open Science Cloud).
3. **Open Access Publications**: All peer-reviewed scientific publications arising from the grant must be immediately published in full Gold or Green Open Access without embargo.

Section 2: Intellectual Property & Commercial Exploitation

While open science is mandated for foundational research results, background and foreground intellectual property with commercial potential may be protected via patent applications prior to public dissemination. Consortium agreements must specify ownership shares and commercial licensing terms.
