Horizon-AI 2026 Proposal: QuantumVision: Ultra-Resolution Clinical Medical Imaging

Proposal ID: PROP-02-BUDGET-FLAW | **PI:** Prof. Marcus Thorne
Consortium: Charite Berlin (Germany), Karolinska Institutet (Sweden), Politecnico di Milano (Italy)
Requested Grant: €2,950,000.00

Abstract

QuantumVision pioneers quantum-inspired diffusion models for automated tumor margin delineation with sub-millimeter precision in magnetic resonance scans.

Scientific Methodology

Our network architecture combines spatial attention with quantum tensor decomposition to process multi-spectral volumetric clinical imaging.

Impact And Dissemination

Clinical validation in 3 hospital research wards with potential to accelerate radiology diagnosis workflows by 30%.

Work Packages

WP1: Diffusion models. WP2: Hospital clinical validation. WP3: Regulatory software submission.

Budget

Budget allocates €600,000 for external outsourced testing subcontracting (20.3%). Indirect costs requested total €600,000 to cover full departmental administration.
