Horizon-AI 2026 Proposal: GreenTransformer: Ultra-Sparse Attention for Eco-Computing

Proposal ID: PROP-05-CONSORTIUM-DEFECT | **PI:** Dr. Amira Ben Salem
Consortium: Esprit Research (Tunisia), Sorbonne (France)
Requested Grant: €1,712,500.00

Abstract

GreenTransformer develops dynamic structured pruning algorithms to cut foundation model inference carbon emissions by 60%.

Scientific Methodology

We propose energy-aware token routing based on reinforcement learning policies evaluated on green cloud data centers.

Impact And Dissemination

European Open Science Cloud deployment and integration into popular open repositories.

Work Packages

WP1: Pruning architectures. WP2: Hardware profiling. WP3: Open-source release.

Budget

Compliant direct and indirect cost schedule.
