# Horizon-AI 2026 Proposal: GreenTransformer: Ultra-Sparse Attention for Eco-Computing

**Proposal ID:** PROP-05-MISSING-PITCH | **PI:** Dr. Amira Ben Salem
**Consortium:** Esprit Research (Tunisia), Sorbonne (France), Univ Barcelona (Spain)
**Requested Grant:** €1,712,500.00

## Abstract

GreenTransformer develops dynamic structured pruning algorithms to cut foundation model inference carbon emissions by 60%.

## Scientific Methodology

We propose energy-aware token routing based on reinforcement learning policies evaluated on green cloud data centers.

## Impact And Dissemination

European Open Science Cloud deployment and integration into popular HuggingFace repositories.

## Work Packages

WP1: Pruning architectures. WP2: Hardware profiling. WP3: Open-source release.

## Budget

Compliant budget.
